**Announcement of Pacific Gas and Electric Company's
Filing with the Federal Energy Regulatory
Commission of a Request to Use the Traditional
Licensing Process for Relicensing of the Camp Far West 60 kilovolt Transmission Line
Project,
FERC Project No. 10821**

Pacific Gas and Electric Company (PG&E) owns and holds the existing Federal Energy Regulatory Commission (FERC) license for the Camp Far West 60 kilovolt (kV) Transmission Line Project, FERC Project No. 10821, a transmission line project in Yuba and Placer counties, California. The Project is composed of a 10.9-mile long three phase, 60 kV, wood pole transmission line extending from South Sutter Water District's (SSWD) Project Powerhouse (part of FERC Project No. 2997) in Placer County, to an interconnection with PG&E's switch tower on the Smartville-Nicholas No. 1 60 kV transmission line adjacent to a Beale Air Force Base meter station in Yuba County. The current FERC license for the Project expires on June 30, 2021. On or about June 15, 2016, PG&E filed with FERC a Notice of Intent to File an Application for New License by June 30, 2019 (NOI) and a Pre-Application Document (PAD).

In addition, on or about June 15, 2016, PG&E filed with FERC a request for FERC's authorization for PG&E to use the Traditional Licensing Process (TLP), as described in 18 C.F.R., Part 4, Subparts D-H and, as applicable, Part 16, to relicense the Camp Far West 60 kV Transmission Line Project. PG&E made the request because use of the TLP will not affect the timely issuance of a new license, the resource issues related to the relicensing are not complex, the level of controversy is expected to be low. Additionally, the cost to use the TLP is significantly less than the cost to use the Integrated Licensing Process (ILP), and PG&E expects few disputes regarding studies. PG&E's request to use the TLP is available in electronic format on FERC's eLibrary.

Comments on PG&E's request to use the TLP must be filed with FERC within 30 days following the date that PG&E filed its request with FERC, and must reference the Camp Far West 60 kV Transmission Line Project, FERC Project No. 10821. Comments should address the likelihood of timely license issuance,

complexity of the resource issues, level of anticipated controversy, relative cost of the TLP as compared to the ILP, amount of available information, potential for significant disputes over studies, and other pertinent factors.

Comments must be submitted via electronic filing pursuant to Section 385.2003(c), or an original and two copies of the comment to the Office of the Secretary, Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426.

Questions regarding PG&E's request to use the TLP should be addressed to Mark Stewart, Electric FERC License Coordinator, Pacific Gas and Electric Company, 4636 Missouri Flat Road, Placerville, CA (530) 621-7243.
