Re: Request for Extension of Time to Address Recommendations from the Independent Consultants' Safety Inspection Reports for Beardsley, Donnell's and Tulloch Dams

Dear Mr. Blackett,

In response to your letter dated February 4, 2025, Tri-Dam requests an extension of time to address remaining recommendations from the Eleventh and Twelfth Independent Consultants' (ICs) Safety Inspection Reports for the Tri-Dam Projects, FERC Nos. 2005 and 2067. The attached plan and schedule are unchanged from Tri-Dam's December 19, 2024 submittal to FERC; however, the request adds new columns to indicate the previously approved completion date and a new column for the requested (extended) completion date. Updates on progress toward individual recommendations since December 2024 are included in the "Status" column to demonstrate progress. Many recommendations relate to the Supporting Technical Information Document (STID), which can only be submitted once fully complete. A number of completed recommendations related to the STID are still marked "in progress" as a result.

As requested, incomplete recommendations from the Eleventh Safety Inspection have also been incorporated into the plan and schedule below.

Tri-Dam also submits the attached memorandum completed by Gannett Fleming to address recommendations 2017-R-03 and 2017-R-18. Tri-Dam has reviewed this memorandum and agrees with its findings.

The enclosed attachments are filed as Critical Energy Infrastructure Information (CEII).

If you have any questions regarding this filing, please contact me at (209) 965-3996.

Regards,

Alex Brown, P.E.  
Chief Dam Safety Engineer
